3. Project Design Phase

Objective

To design the logical workflow and automation structure before implementing it in Flow Designer.

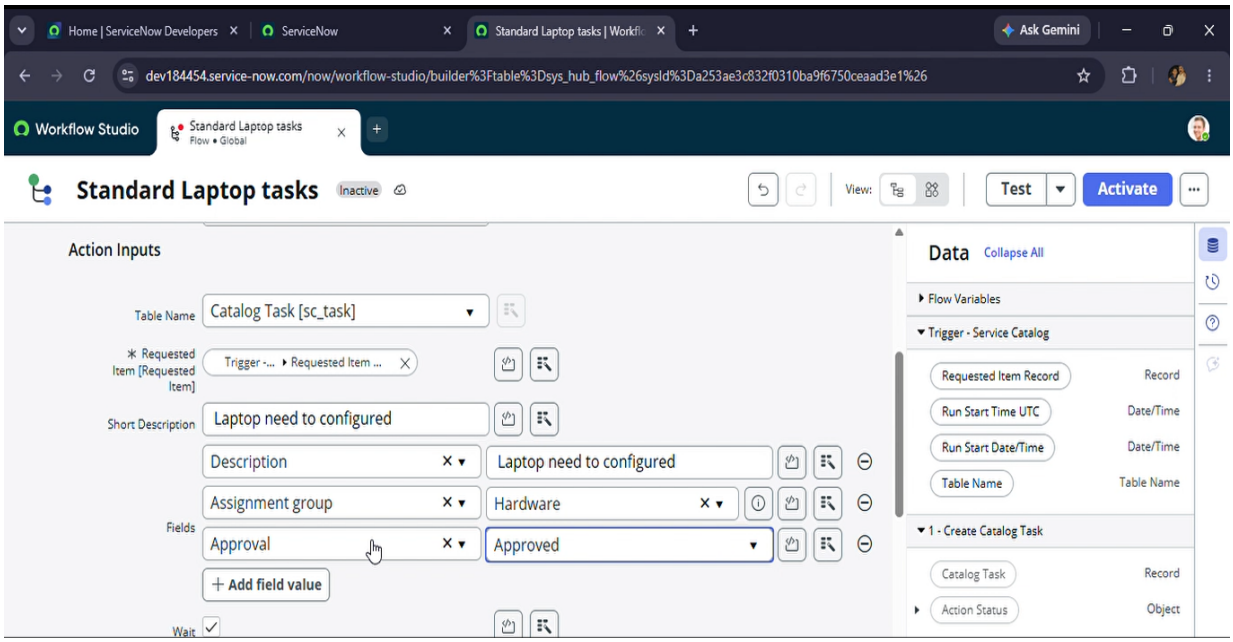

Activities Performed

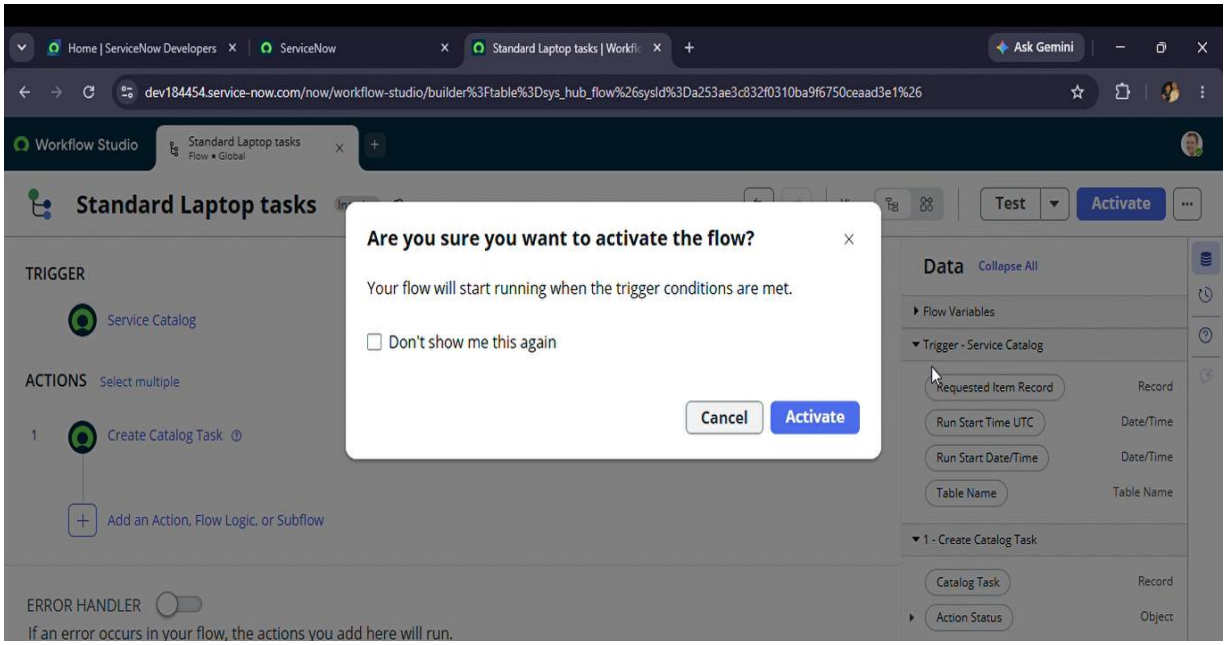

- Design the trigger that starts the flow when the required procurement request is created or submitted.
- Define conditions to identify standard laptop orders.
- Design the approval stage for the appropriate approver.
- Define the actions for approved and rejected requests.
- Plan notifications and status updates so that users can track the request.
- Map data between the trigger and subsequent Flow Designer actions.

Expected / Produced Output

High-level workflow design: Trigger → Condition → Approval → Approved/Rejected Branch → Fulfilment/Notification → Completion.
