4. Project Planning Phase

Objective

To organize the implementation into manageable activities and define the sequence of work.

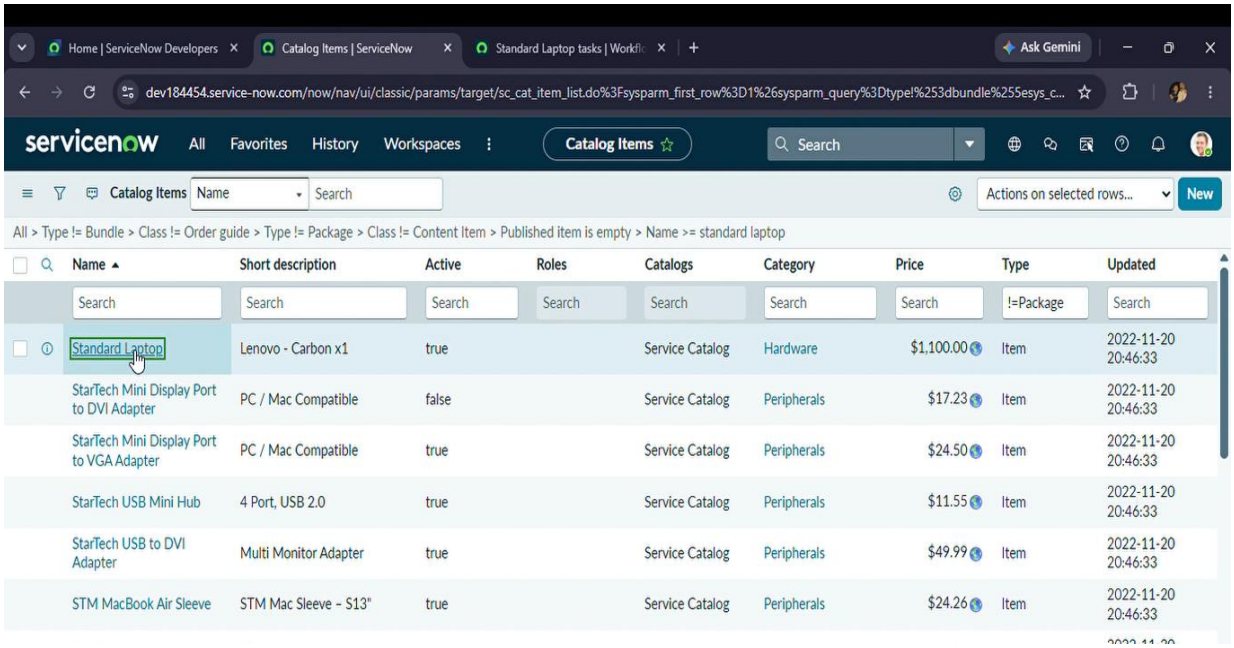

Activities Performed

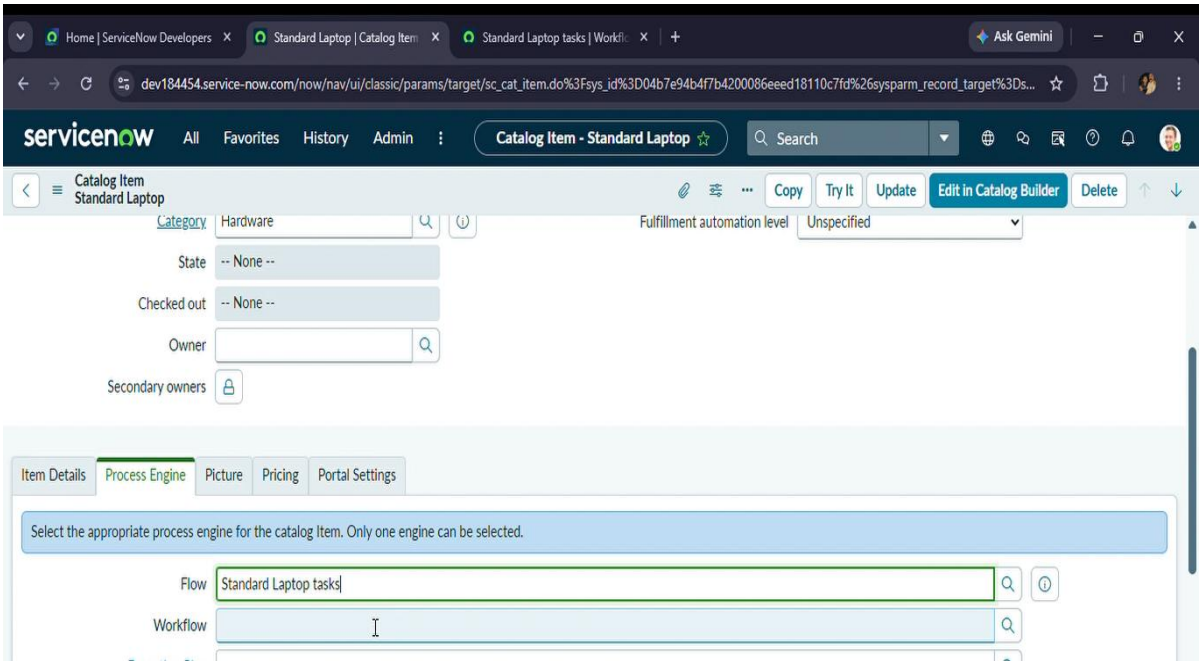

- Review the project objective and finalize the scope.
- Prepare the required ServiceNow application, tables, users, roles, and test data.
- Create the Flow Designer trigger and required conditions.
- Configure approval and subsequent automation actions.
- Prepare positive and negative test scenarios.
- Capture screenshots and prepare the final project documentation.
- Prepare the demonstration sequence for explaining the completed automation.

Expected / Produced Output

The planned implementation follows a structured sequence from environment preparation to development, testing, documentation, and demonstration.
