5. Project Development Phase

Objective

To implement the designed laptop procurement automation in ServiceNow Flow Designer.

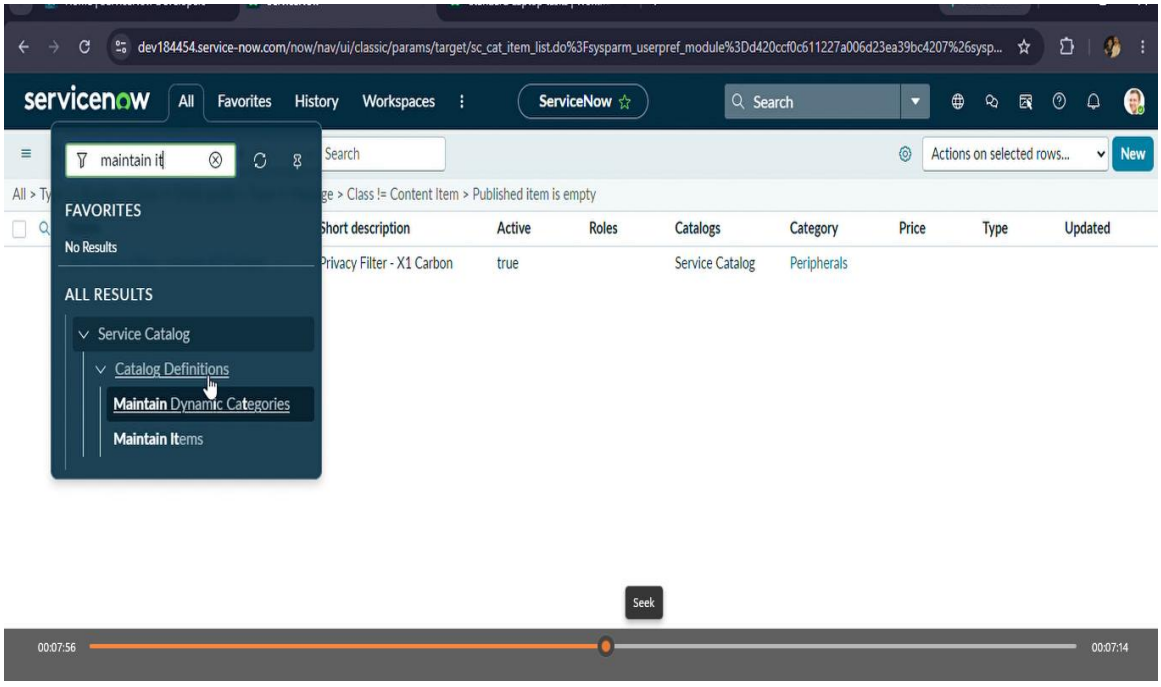

Activities Performed

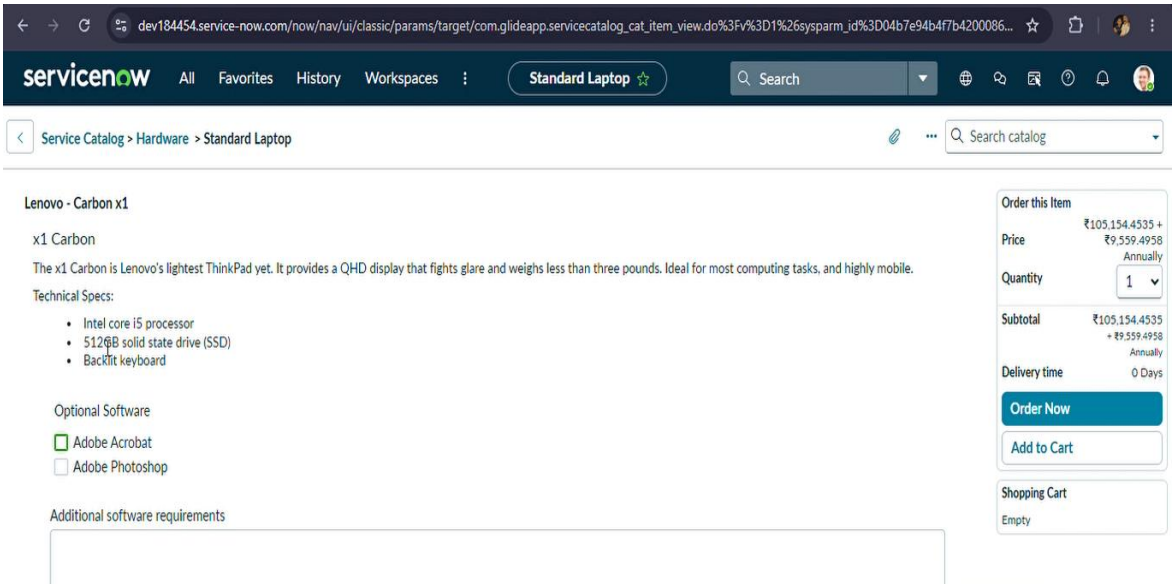

- Open Flow Designer and create the required flow for standard laptop procurement.
- Configure the trigger that starts the automation.
- Add the condition used to identify standard laptop requests.
- Configure the approval action and specify the appropriate approver.
- Create the approved path for continuing the procurement/fulfilment process.
- Create the rejected path for updating the request and informing the requester.
- Configure notifications or other required actions.
- Save, validate, and activate the flow after configuration.

Expected / Produced Output

A working ServiceNow Flow Designer automation for standard laptop procurement.
