6. Project Testing Phase

Objective

To verify that the automated flow behaves correctly for different request conditions.

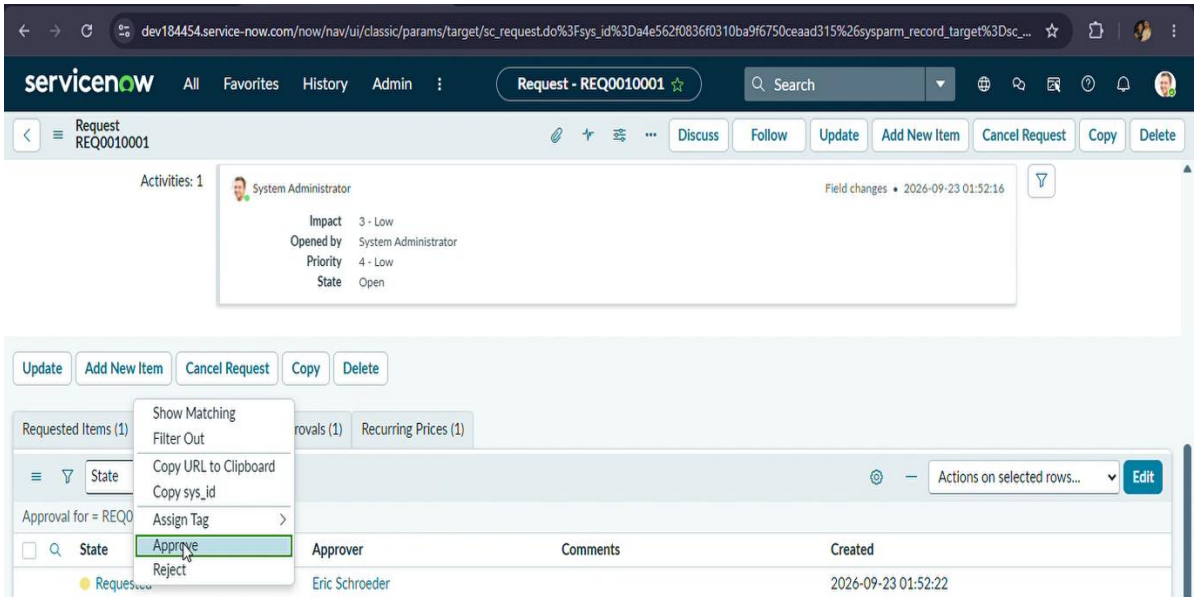

Activities Performed

- Test a valid standard laptop request.
- Verify that the configured trigger starts the flow.
- Verify that the standard laptop condition is evaluated correctly.
- Test the approval process with an approved response.
- Test the rejection path with a rejected response.
- Verify that notifications, status changes, and fulfilment actions occur as expected.
- Check that non-standard requests do not incorrectly follow the standard laptop automation.
- Record any issues and correct the flow configuration before final demonstration.

Expected / Produced Output

The flow should complete the intended automation path without errors for valid test cases, while rejection and non-applicable cases should follow their respective paths.
